Asbestos Awareness

T. +44 (0) 1271 446195

Asbestos was commonly used in construction up until the year 2000 because of its strength and thermal insulation properties. It is one of the most dangerous materials ever used in building construction and one that if disturbed or left in a poor condition, can cause life threatening illnesses. Asbestos is the UK's number one killer for workplace deaths, one that causes thousands of deaths every year.

Test and Certification:

At the end of the course you will be given a test of 20 multiple choice questions. The required pass rate is 85%.

You will be able to download and print (if required) a digital certificate on completion of the course.

Main course certificates last 12 months.

Who is this training for?

This course is targeted primarily at anyone who may come into contact with Asbestos as part of their job. Traditionally this could typical tradespeople such as builders, plumbers, electricians, anyone that performs any sort of fixing, installations or demolitions in buildings constructed before the year 2000. All work with asbestos containing materials falls under the Control of Asbestos Regulations 2012. Under these regulations employers must ensure that adequate information, instruction and training is provided to employees who are liable to be exposed to asbestos.

What does the course cover?

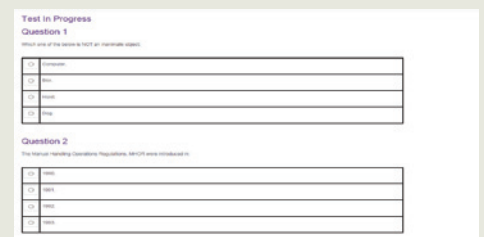

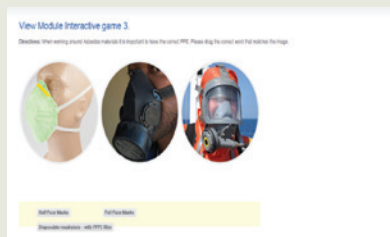

- Different types of Asbestos.
- Avoiding the Risks.
- Codes, Practices and Regulations.
- Basic Principles of Asbestos Awareness.
- Asbestos and its Effects.

Training Outcomes:

- Understand the health implications that Asbestos has on humans.
- Be able to deal with the possible release of Asbestos fibres on site and how to decontaminate yourself in accordance with your company procedures.
- Know where you can find different types of Asbestos Containing Materials (ACM's) in industrial and residential properties.
